## IDM Starts 2017 Resource Expansion Drilling

IDM Mining Ltd. (TSXV:IDM) announced it has commenced a spring 2017 Phase I drill program at its Red Mountain project in British Columbia. The underground drill campaign is expected to consist of ~35 holes, totaling 8,000m. The program is focused on expanding mineralization to the north as well as up-dip and down-dip of the AV and JW zones. The resources of these zones combined with that of the Marc zone currently have a strike length of 600m. Previous intercepts indicate the gold mineralization extends for an additional 800m to the north. Initial step-out drilling at the mostly undrilled SF zone, which is north of JW, is expected to cover a strike length of ~300m to the north of the existing resources. The company has also planned step-out drilling up-dip and down-dip from the AV and JW zones where previous drilling suggests that mineralization continues for hundreds of meters. The zones remain open down-dip along strike. IDM continues to trade at a discount to peers on a P/NAV basis (0.47x vs. peers at 0.51x) and on a per ounce basis (C\$39/oz vs. peers at C\$53/oz). We expect the pending drill results and feasibility study for Red Mountain, coupled with the project's ongoing de-risking (engineering and permitting), should help close the valuation gap to peers.

Company Information: IDM Mining Ltd. (TSXV:IDM)																																																																													
IDM Mining is a mineral exploration and development company focused on advancing its 669k oz AuEq (2.4 Mt at 8.68 g/t AuEq) Red Mountain underground gold-silver project in British Columbia to production. The company completed a 5km drill program in 2016 and is planning further underground resource expansion and exploration drilling in 2017. IDM expects to complete a feasibility study for the project in H1 2017, followed with an Environmental Assessment certificate in H2 2017/H1 2018.
